

ABSTRACT OF THE DISCLOSURE

IDENTIFICATION OF GENE SEQUENCES AND PROTEINS INVOLVED  
IN VACCINIA VIRUS DOMINANT T CELL EPITOPES

The present invention relates to the identification of gene sequences and proteins  
5 involved in vaccinia virus dominant T cell epitopes. Two vaccinia virus CD8<sup>+</sup> T cell  
epitopes restricted by the most common human MHC class I allele, HLA-A0201 have  
been identified. Both epitopes are highly conserved in vaccinia and variola viruses.  
The induction of the T cell responses following primary vaccination is demonstrated by  
the kinetics of epitope specific CD8<sup>+</sup> T cells in 3 HLA-A0201 individuals. This  
10 information will be useful for the design and analyses of the immunogenicity of  
experimental vaccinia vaccines, and for basic studies of human T cell memory.
